

Practical: 5

1. Problem Statement : Develop an android app which displays a form to get following information from user. Username, Password, Gender(RadioButton), Hobby(Checkbox), Are you student?(Toggle Button). Form should be followed by a Button with label "Submit".

Implement Above using following layouts:

- 1.Linear Layout
- 2.Relative Layout
- 3.Table Layout

When user clicks the Submit button, a message should be displayed to user describing the information entered on next page.

MainActivity.java :

```
package com.example.p5;
import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.CheckBox;
import android.widget.EditText;
import android.widget.RadioButton;
import android.widget.RadioGroup;
import android.widget.Switch;
import android.widget.Toast;
import java.util.ArrayList; // Import ArrayList
public class MainActivity extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        EditText username = findViewById(R.id.user);
        EditText password = findViewById(R.id.pass);
        Button submit = findViewById(R.id.button);
        CheckBox checkBox1 = findViewById(R.id.checkBox);
        CheckBox checkBox2 = findViewById(R.id.checkBox2);
```

```
CheckBox checkBox3 = findViewById(R.id.checkBox3);
Switch student = findViewById(R.id.switch1);
submit.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View v) {
        RadioGroup radioGroup = findViewById(R.id.radio_group);
        int selectedId = radioGroup.getCheckedRadioButtonId();
        if (selectedId != -1) {
            RadioButton selectedRadioButton = findViewById(selectedId);
            String gender = selectedRadioButton.getText().toString();
            Intent intent = new Intent(MainActivity.this, MainActivity2.class);
            intent.putExtra("username", username.getText().toString());
            intent.putExtra("password", password.getText().toString());
            intent.putExtra("gender", gender);
            intent.putExtra("student", student.getText().toString());
            // Create an ArrayList to store selected checkbox items
            ArrayList<String> selectedItems = new ArrayList<>();
            // Check each checkbox and add its label to the list if it's selected
            if (checkBox1.isChecked()) {
                selectedItems.add(checkBox1.getText().toString());
            }
            if (checkBox2.isChecked()) {
                selectedItems.add(checkBox2.getText().toString());
            }
            if (checkBox3.isChecked()) {
                selectedItems.add(checkBox3.getText().toString());
            }
            // Put the selected items list as an extra intent
            intent.putStringArrayListExtra("selected_items", selectedItems);
            startActivity(intent);
        } else {
            Toast.makeText(getApplicationContext(), "Please select your gender!",
            Toast.LENGTH_LONG).show();
        }
    }
});
}
```

MainActivity2.java :

```
package com.example.p5;
import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.os.Bundle;
import android.util.Log;
import android.widget.TextView;
import java.util.ArrayList;
public class MainActivity2 extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main2);
        Intent intent = getIntent();
        String username = intent.getStringExtra("username");
        String password = intent.getStringExtra("password");
        String gen = intent.getStringExtra("gender");
        String student1 = intent.getStringExtra("student");
        // Retrieve the selected items list from the Intent
        ArrayList<String> selectedItems =
getIntent().getStringArrayListExtra("selected_items");
        // Check if the list is not null
        if (selectedItems != null) {
            // Concatenate the selected hobby items
            StringBuilder hobbiesBuilder = new StringBuilder();
            for (String item : selectedItems) {
                hobbiesBuilder.append(item).append(", ");
            }
            // Remove the trailing ", " from the concatenated string
            String hobbies = hobbiesBuilder.toString();
            if (hobbies.endsWith(", ")) {
                hobbies = hobbies.substring(0, hobbies.length() - 2);
            }
            // Set the concatenated string in the TextView for hobbies
            TextView hobbyTextView = findViewById(R.id.hobby);
            hobbyTextView.setText(hobbies);
        }
        // Set username, password, and gender in their respective TextViews
```

```
TextView user = findViewById(R.id.user);
user.setText(username);
TextView pass = findViewById(R.id.pass);
pass.setText(password);
TextView gender = findViewById(R.id.gender);
gender.setText(gen);
TextView student = findViewById(R.id.student);
student.setText(student1);
}
}
```

Activity_Main.xml :

```
